

SEP 2022 NEWSLETTER

Check out what we've been up to!

What Happened in Sep

Book updates will be in by end of the month.

Damian is also keeping his three chapters up to date [[with the help of Thijs Lecomte](#)] in the [Microsoft 365 Security for IT Pros book](#) that is headed up by fellow MVP Michael van Horenbeeck. The new 2022 edition continues to be updated so make sure to pick up your copy today!

Both Dave and I continue to look for updates to our blog sites, more PowerShell Tips of the Week, these newsletters, new PowerShell projects, books and more. Have suggestions or things you would like to see in any of the mediums? Just let us know.

Damian is also writing for the ScriptRunner blog as well as Practical 365 blog, so look for his posts there.

We have a sponsor of the Newsletter and the Exchange Online PowerShell book, look for a link at the bottom of the Newsletter. Please check them out! ScriptRunner is heavily invested in the PowerShell community and based in Germany.

For those subscribing, thank you for reading these and as always:

If you have any feedback on these new initiatives or if you have any feedback on the newsletters or our books, feel free to contact us at feedback@practicalpowershell.com.

Thanks again for subscribing and enjoy the content!

~ Damian and Dave

PowerShell Script of the Month

In this PowerShell sample code for the month, we have a script that will run the Configuration Analyzer for Microsoft Purview (CAMP) report and copy that to the directory where the script was run from. This useful script is provided by Microsoft to query your tenant's Compliance Center for best practices. More information can be found [HERE](#).

```
Function CAMP {  
    # Run CAMP Report  
    Write-Host "
```

```
Write-Host '.. Installing Configuration Analyzer for Microsoft Purview (CAMP) PS Module' -
ForegroundColor Yellow
$CAMPGood = $True
$CAMPInstall = $False
Try {
    $Version = (Get-InstalledModule CAMP -ErrorAction STOP).Version
} Catch {
    Write-Host 'CAMP Not Installed.' -ForegroundColor Yellow
    $CAMPInstall = $True
}
If ($CAMPInstall) {
    Try {
        Install-Module CAMP -ErrorAction Stop | out-null
    } Catch {
        $CAMPGood = $False
    }
}
If ($MCCAGood){
    Import-Module CAMP
    Get-CAMPReport
}
#Report this
$UserName = $env:UserName
$CAMPPath = "C:\Users\$UserName\AppData\Local\Microsoft\CAMP\"
$CAMPReportFile = Get-ChildItem "$CAMPPath\camp*.html" | Sort LastWriteTime | Select -Last 1
$CAMPReport = (($CAMPReportFile).VersionInfo).FileName
$Path = (Get-Item -Path ".\" -Verbose).FullName
Copy $CAMPReport $Path
$CAMPReportName = ($CAMPReportFile).Name
}# End of CAMP Function
```

Blog posts by
Matt Wade

Matt is an engineer-turned-IT nerd and Microsoft MVP. His career began in the nuclear power design field and ended up in SharePoint adoption, pretty much by mistake. He's best known for his SharePoint and Microsoft 365 infographics—especially the Periodic Table of Office 365—and advocating Microsoft Teams as the modern workplace.

SPONSOR - ScriptRunner

An advertisement for ScriptRunner. On the left, it says "ScriptRunner" with a logo, "FREE WEBINAR:", "Kick-start your automation journey 2022 with ScriptRunner!", and a "register now" button. In the center, there are two overlapping windows: "ScriptRunner" showing a dashboard and "PowerShell" showing a terminal. On the right, it says "HOW TO AUTOMATE:" followed by a list: "Office 365", "Azure", and "Active Directory tasks". The background is orange and grey with gear icons.
